## **The UK-Polish Science Forum - Workshops**

### UK-Polish science collaboration under European Research and Innovation Programmes

The workshop will focus on Polish and British collaboration in Framework Programmes, and in Horizon 2020 in particular. During the workshop British and Polish scientists and researchers who have experience of working together on projects will showcase their work, share experience and best practice, but also look to the future to try and identify new research projects, areas of cooperation and partnerships.

### Research management (TBC)

Attending this workshop will give attendees an opportunity to see how to apply project management tools when working on a scientific research/project. This workshop will also focus on administrative and organizational aspects of a project.

### Venture Camps

The founder of Cambridge Venture Camps, Professor Alan Barrell, will host this workshop. The aim is to increase and promote cross-border entrepreneurship among academics and scientists and turn ideas and technologies into real products and services.
